***More and more consumers are taking the air out of tires.
One million tires inflated with Purigen98. Dealers and consumers reap benefits of high purity
nitrogen tire inflation gas.***

September 17, 2007 Sunrise, Florida

A new kind of energy is catching on. Purigen98, a high purity nitrogen tire inflation gas, has now been installed in more than one million tires. This form of gas has been used for years in professional circles like car racing and airplanes. The professionals love it because Purigen98 inflated tires retain their optimal pressure much longer than standard tires. By maintaining the proper tire pressure, motorists enjoy better fuel economy, longer tire life, improved vehicle handling and a higher degree of safety. Maximizing fuel efficiency also leads to a reduction of the consumer's carbon footprint.

Purigen98 uses trademarked blue caps on tires to show that they have been inflated with Purigen98. The company has shipped in excess of 1.4 million blue caps to its dealers and estimates that the millionth tire was converted in June of 2007.

"We are extremely pleased to have reached this milestone in less than two years of offering this product to the automotive market" said Robin Pearl, president of Purigen98. "With over one billion tires on the road in the US today, we still have a long way to go, but as a common saying goes, the first million is always the toughest. After that it becomes easy".

Purigen98 is now available nationally in most major markets. Dealers are trained to use special equipment and tools to convert the air in a tire to Purigen98. The process takes about 10 minutes and most dealers charge about \$10 per tire. Once the tire is converted, dealers usually top the tire off for free. It is a small investment that pays dividends over the life of the tire. Purigen98 is completely safe, reduces oxidation of the rubber compounds and eliminates moisture that that can also lead to unstable tire pressures.

With more than one million tires on the road today successfully using Purigen98, this technology is poised to become the new standard in the future of the automotive industry.

About Purigen98:

N₂Revolution, Inc, based in Sunrise, Florida., develops and manufactures leading-edge automotive solutions, its flagship product being Purigen98™. N2Revolution recently received the Emerald Award from Broward County in the Innovative Procedures/Process Improvement category and has been featured on MSNBC and in a number of broadcast and print media nationwide. Led by a team of distinguished veterans from the automotive, environmental, engineering and scientific industries, the company is committed to developing high-quality, affordable and environmentally friendly innovations that enhance the quality of life of today's sophisticated consumer. For more information about N2Revolution and its energy-saving solutions, call 954-838-7545, e-mail info@n2revolution.com or visit www.purigen98.com.
