PurigeN98(TM) Recommended and Approved for Nissan GT-R

PurigeN98(TM) Recommended and Approved for Nissan GT-R

Nitrogen Tire Inflation System Selected by Nissan North America to Participate in Nissan's Tech-Mate Program as Authorized Tool and Equipment Vendor

SUNRISE, Fla., May 20 /PRNewswire/ -- Nitrogen is emerging as the latest consumer trend in the auto industry -- especially for high-performance vehicles. Every 2009 Nissan GT-R, which makes its U.S. debut in June and arguably is the most anticipated new vehicle of the year, will arrive in the country with nitrogen-filled tires. No Nissan dealer will be certified to sell a GT-R unless it can provide access to nitrogen in order to maintain them in top factory condition.

With that in mind, Nissan has announced the PurigeN98(TM) high-purity nitrogen tire inflation system is now "Recommended and Approved Service Equipment for the Nissan GT-R Certified Dealer Service Shop." PurigeN98(TM) is available only from N2Revolution, Inc., a provider of leading edge automotive products.

"We are extremely pleased that our PurigeN98(TM) tire inflation system was selected to participate in Nissan's Tech-Mate program as an authorized tool and equipment vendor for all its vehicles, including the new GT-R," said PurigeN98(TM) President Robin Pearl. "The specifications that dealerships must meet in order to carry the GT-R are among the most stringent in the auto industry and we are proud to measure up to those high standards."

The PurigeN98(TM) tire inflation system is guaranteed to deliver a minimum of 98 percent pure nitrogen, the same sort of high-purity gas used by NASCAR and IndyCar Series drivers in their tires when racing. PurigeN98(TM) has been endorsed by four-time NASCAR Sprint Cup Champion Jeff Gordon, who uses it in his personal cars. Both the Mario Andretti Racing School and Jeff Gordon Racing School also have entered into exclusive agreements with N2Revolution, Inc. to use PurigeN98(TM) in the tires of their racing experience cars.

PurigeN98(TM) actually is the smart choice for all motorists -- not just those fortunate enough to purchase one of the limited number of GT-Rs that will be available in America. Nitrogen-filled tires help maintain proper tire pressure on all cars, which, in turn, helps improve fuel efficiency and reduce tire wear. And, because nitrogen molecules are more stable than those of oxygen and contain no moisture, the gas doesn't degrade the rubber or steel belts or leak through the walls of tires as quickly. As a result, drivers can realize significant savings on both fuel and tire replacement costs.

About PurigeN98(TM)

N2Revolution, Inc., based in Sunrise, Fla., develops and manufactures leading-edge automotive solutions, with PurigeN98(TM) as its flagship product. Led by a team of distinguished veterans from the automotive, environmental, financial, engineering and scientific industries, the company is committed to developing high-quality, affordable, environmentally friendly products that enhance the quality of life for today's sophisticated consumers.
