

## **N2Revolution's PurigeN98 Pre-Launch Picks Up Steam**

### *Fuel-Saving Tire Inflation Gas Product Receives National Attention After Initial Market Entry*

(PRWEB) August 31, 2005 -- N2Revolution, Inc., which develops and manufactures environmentally friendly automotive solutions, is pleased to announce that its flagship product, PurigeN98, has garnered significant attention from the automotive market since its pre-launch announcement.

PurigeN98 is a tire inflation gas (98% pure nitrogen) that has been scientifically proven to prolong the life of a tire, and improve fuel economy.

Following the initial announcement on August 17, 2005 a number of Nitroflators, which generate and dispense PurigeN98, were shipped throughout the state of Florida, which is the initial focus of the distribution strategy. Additionally there have been multiple order placements and multi-unit deals inked, and others still in the pipeline advanced. National response has been similarly vibrant.

"We are extremely pleased with the initial response we have received from our different constituents," said Robin Pearl, president of N2Revolution. "We set out to develop an idea that we believe serves a higher purpose, one that not only reduces the environmental impact of tire disposal but also delivers a superior alternative to every driver, and not solely those that are familiar with the technology."

Nitrogen inflation has not been widely available to the average consumer, though it has been used for decades in such sports settings as Formula One, NASCAR, Tour de France; in heavy-duty off road equipment; and by NASA, commercial and military aircraft, including Air Force One.

N2Revolution's president, Pearl, is experienced at developing energy-efficient, environmentally friendly innovations. As co-founder of OceanBoy Farms, Inc., he was an integral member of the team that developed the sustainable aquaculture systems of the largest organic shrimp farm in the US.

Because it is 98% pure, PurigeN98 is the highest guaranteed purity level of nitrogen on the market. Industry studies have found that the purer the gas, meaning the less oxygen it contains, the more effectively it will perform. Additionally, N2Revolution has a patent-pending method of guaranteeing this unprecedented level of purity, among other process, design and functional differentiating features of the Nitroflator.

PurigeN98 is being delivered to the U.S. market via a strategic rollout, which combines geographic, industry segment and company-specific distribution of the Nitroflator.

The official product launch will take place on Wednesday, September 14, 2005, 6:00 p.m., at N2Revolution's headquarters, located at 5289 NW 108th Avenue in Sunrise, Florida. It begins with a press briefing at 5:30 p.m., and will continue through the evening.

At the event, industry participants, media and the public will be able to preview the Nitroflator and sample PurigeN98, and by appointment, tour the N2Revolution facility. Those wishing to attend the event are asked to RSVP, at 954-741-4278, as space is limited.

N2Revolution, Inc, based in Sunrise, Florida, develops and manufactures leading-edge automotive solutions. Led by a team of distinguished veterans from the automotive, environmental, engineering and scientific

realms, the company is committed to developing the highest-quality, affordable and environmentally friendly innovations that enhance the quality of life of today's sophisticated consumer.
