Dear Mark Worden,

At the beginning of August this year I was very interested in adding Nitrogen to our service menu. I needed a product that I felt our customers would benefit by its use. This seemed like the perfect product that could enhance fuel economy, increase tire life, help reduce tire pressure monitor light issues and generate income for our Service Dept.

I already knew that Semi-Trucks, Airplanes, Military vehicles, and even Nascar was using it in their tires, so it has positive advantages for its use.

I wanted a machine with a large reservoir, portable, regenerates quickly, does 5 tires at once, easy to use and was rechargeable.

We looked a few different machines from different manufactures and even had a couple of on-site demonstrations.

The machine that was the right fit for us was the Purigen98 Mobiflator 6164. It had it all. Sixty gallon capacity, mobile on large casters, five at once fill lines, and is rechargeable so we "do not" need a 120v wall outlet when we need to use it. This last point was very important since we are going to put nitrogen in all of our new vehicles and could use the machine outside if we had too.

We bought our machine the middle of August, and to date have been doing so well with retail sales that the cost of our machine is literally paid off.

Sincerely,

A handwritten signature in cursive script that reads "Charles Salemi".
